

WebRotate 360 - Prestashop Integration Guide v1.0

Rev: Sept 20th, 2012

Follow this simple guide to integrate [WebRotate 360 Product Viewer](#) into your Prestashop web store. Once integrated, your visitors will see an interactive product view with zoom capability, 360 rotation, extensive hot-spot / annotation features (and more!) conveniently located in place of the main product image (if configured for a given product).

The current version of the integration was tested on 1.4.x (including 1.4.9) and 1.5.

Step 1 - Download and install necessary files

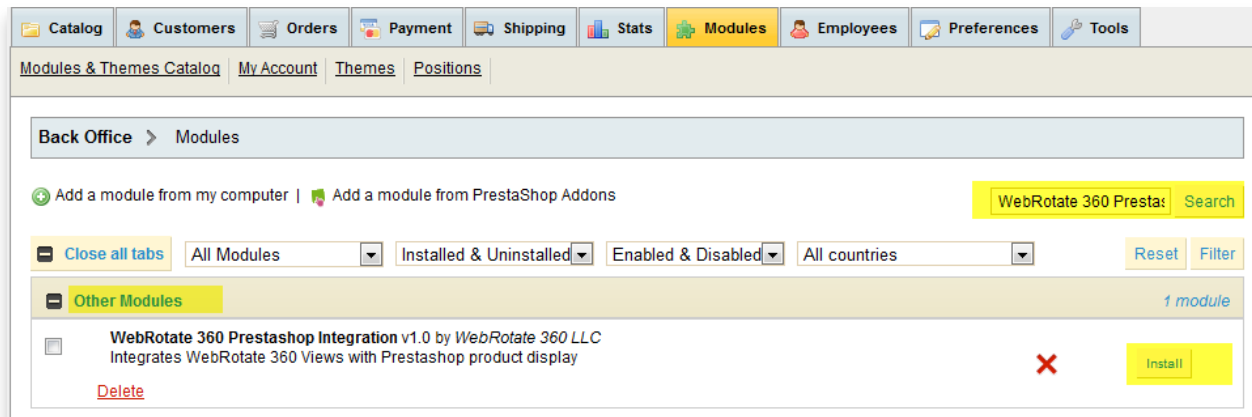

Download [WebRotate 360 Prestashop Integration](#), unzip manually, and copy files and folders as follows (you can also install directly under Modules in the Admin - **please still follow these exact steps below**):

1. Copy **360assets** folder to the root of your Prestashop site (it's just a sample 360 view).
2. Copy **AdminWebRotate360.php** from webrotate360/admin/tabs into your admin/tabs folder.
3. Copy **WebRotate360.php** from webrotate360/classes into your classes folder located in the root.
4. Copy **webrotate360** folder from webrotate360/modules into your modules folder located in the root (overwriting any files that were created there automatically if installed using the Add from my computer option or directly from the Prestashop Addon Marketplace).

Step 2 - Install

Login in your Prestashop admin and navigate to the Modules section. Then expand Others section in the Modules list or use Search box and type webrotate to quickly find the module. Once found, select Install

to install the module. **Remember to backup your database before proceeding with the installation to ensure that you can restore your data if something goes wrong with the module.**

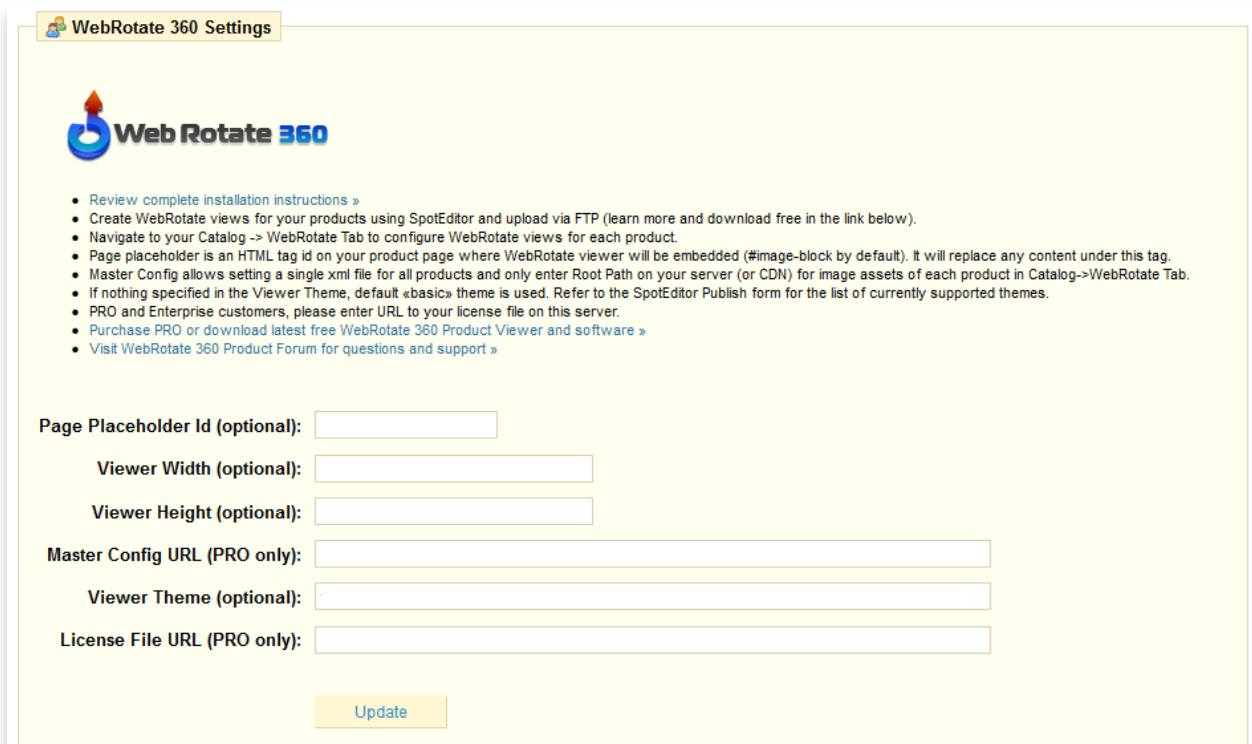

Once the module is installed, please select Configure and carefully read the instructions.

Step 3 - Configure

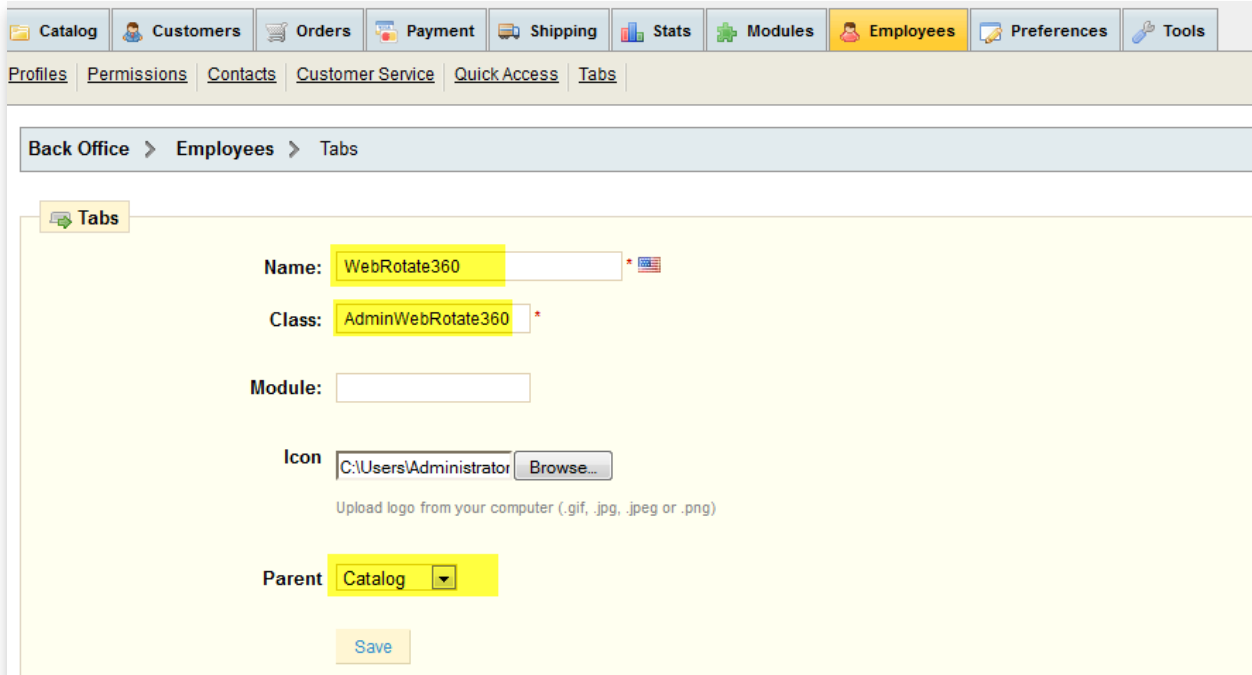

In the most basic setup you don't need to enter anything on the module configuration screen (see immediately below).

Important: if using Prestashop 1.5, please still enter your desired width and height of the viewer on your product pages or just style #image-block in your theme's CSS to have fixed width and height as Prestashop 1.5 doesn't have fixed dimensions for #image-block style in the default theme.

Step 4 - Create Admin Tab

In Prestashop version 1.4.x or lower navigate to the Employees tab and select Tabs immediately below. Then select Add new and enter WebRotate360 as Name and AdminWebRotate360 as Class. Leave the Module field empty. Set Parent to Catalog. You can also assign a tab icon that is included in the supplied zip under admin as tab_logo.png.

The screenshot shows the Prestashop Admin interface. At the top, there is a navigation bar with tabs: Catalog, Customers, Orders, Payment, Shipping, Stats, Modules, Employees (highlighted), Preferences, and Tools. Below this is a sub-navigation bar with links: Profiles, Permissions, Contacts, Customer Service, Quick Access, and Tabs. The main content area has a breadcrumb trail: Back Office > Employees > Tabs. A 'Tabs' icon is shown. The form contains the following fields:

- Name:** WebRotate360 (with a small US flag icon and a red asterisk indicating it is required).
- Class:** AdminWebRotate360 (with a red asterisk indicating it is required).
- Module:** (empty text box).
- Icon:** C:\Users\Administrator (with a 'Browse...' button and a note: 'Upload logo from your computer (.gif, .jpg, .jpeg or .png)').
- Parent:** Catalog (selected in a dropdown menu).

A 'Save' button is located at the bottom of the form.

Save the tab which will now appear in the menu under your Catalog in the Prestashop Admin.

Step 5 - Assign Product Views

Navigate to your Catalog and note the new menu called WebRotate360 at the end of the first line below the Catalog tab (Prestashop 1.4.x). Expand the new tab and select Add new.

Carefully review the instructions and follow these steps to try the test 360 view (sampleshoe) included with this package:

1. Select your test product from the Product combo-box.
2. Give this view a unique name that you could later recognize (e.g same as your product name for example).
3. Enter Config URL which would be <http://yourdomain/360assets/sampleshoe/config.xml> that you have copied in the first step of this integration guide.

Back Office > Catalog > WebRotate 360

Product View Setup

- Select your product from the Product list.
- Give your view a unique name (optional).
- Enter URL to WebRotate 360 configuration XML file on your server for this product. Not required if using Root Path and Master Config XML in the module settings.
- Root Path is optional. If set, it will be used as a base URL for loading image assets specified in the configuration XML file. It can also point to an external CDN server. Use it in conjunction with Master Config in the plugin settings to have a single configuration xml for all your product views.

Product: iPod Nano

View Name: iPod Nano View

Config URL: http://yourdomain/360assets/sampleshoe/config.xml

Root Path (PRO only):

Save

* Required field

Now the sample 360 view should be visible when you expand your test product page in the Prestashop front-end of your store.

To create your own interactive views download our software on our [standalone product page](#), watch tutorial videos located on the same page, or use our new [forum](#) for additional information.

Visit our new equipment store to browse professional [360 photography equipment](#) that we use in our own studio.

Appendix. Creating Admin tab (menu) in Prestashop 1.5

Prestashop 1.5 has a different location for adding your WebRotate360 Admin tab (now called menu) as discussed in the Step 4. To add the new Catalog menu for WebRotate360 in 1.5, please navigate to Administration->Menus, select Add new and enter the same information as discribed in Step 4. Once saved, the new menu will show up under Catalog.
